Walk'n' Roll Cities: an URBACT cooperation in mobility and public space

- Urban Policy Learning Platform
- **Focus:** mobility and public space
- **Spatial cover:** from metropolitan level to neighbourhood and street level
- **Examples of topics:**
 - Metropolitan transport and local active mobility
 - Integration of infrastructures
 - Intelligent parking solutions
 - Changing the mobility mindset of people
 - Placemaking

1

#WalkAndRollCities
Where streets belong to people!

Timeframe and tools of the cooperation

The cooperation is planned until the end of URBACT III, i.e. summer 2022.

Two main tools:

- Thematic meetings: webinar 1 (Nov 2021), webinar 2 (5 April 2022) and a closing seminar (6-7 July 2022 in Barcelona).
- LinkedIn group: <https://www.linkedin.com/groups/8964194/> serving as a sharing platform for the products of the three APNs.

The main reasons for rapid American suburbanization

- the **mortgage loan scheme** that encourages the construction of single-family homes
- the **U.S. Federal Highway Act of 1956**, which made it possible to multiply the length of the highway network with huge subsidies (construction of a new highway 40,000 miles)
- federal policy to **keep gasoline prices low**
- the reform of the tax system, after which the primary source of revenue for local governments is **the real estate tax**
- rebalancing the state aid system **to the extra infrastructure costs of extra-urban development.**

Suburbanization processes in the US

- In most metropolitan regions of the USA, **the size of the built-up area of the city and its surroundings increased much faster than the population growth rate**, ie the housing density of the urban region decreased sharply (from 1500-2500 people / sqkm to 800-1300 people / sqkm)
- In the expanding urban regions, **single-family homes and private car transport** were becoming dominant
- **City of Phoenix:** including agglomeration, housing density decreased from 2431 persons/sqkm in 1950 to 904 in 1990. The increase in the population of the next 40 years means the disappearance of 6,800 sqkm of agricultural land (the built-up area increased from 44 nkm in 1950 to 10,000 sqkm in 1990).

COVID crisis: further outmigration from cities

Oslo analysis

- Increased outmigration in 2020 in the age groups 25-30 and 60-70. Managers (with at least 4 years of university education) were mostly increasing outmoving, showing a **clear teleworking effect**. Among outmigrants people not born in Oslo are over-represented. 2021: outmigration increased even further.
- Moving from the city in the year of Covid - will they return after the pandemic? Marianne Tønnessen. Paper for the ENHR2021 conference (Nicosia/online)

1

2

3

4

5

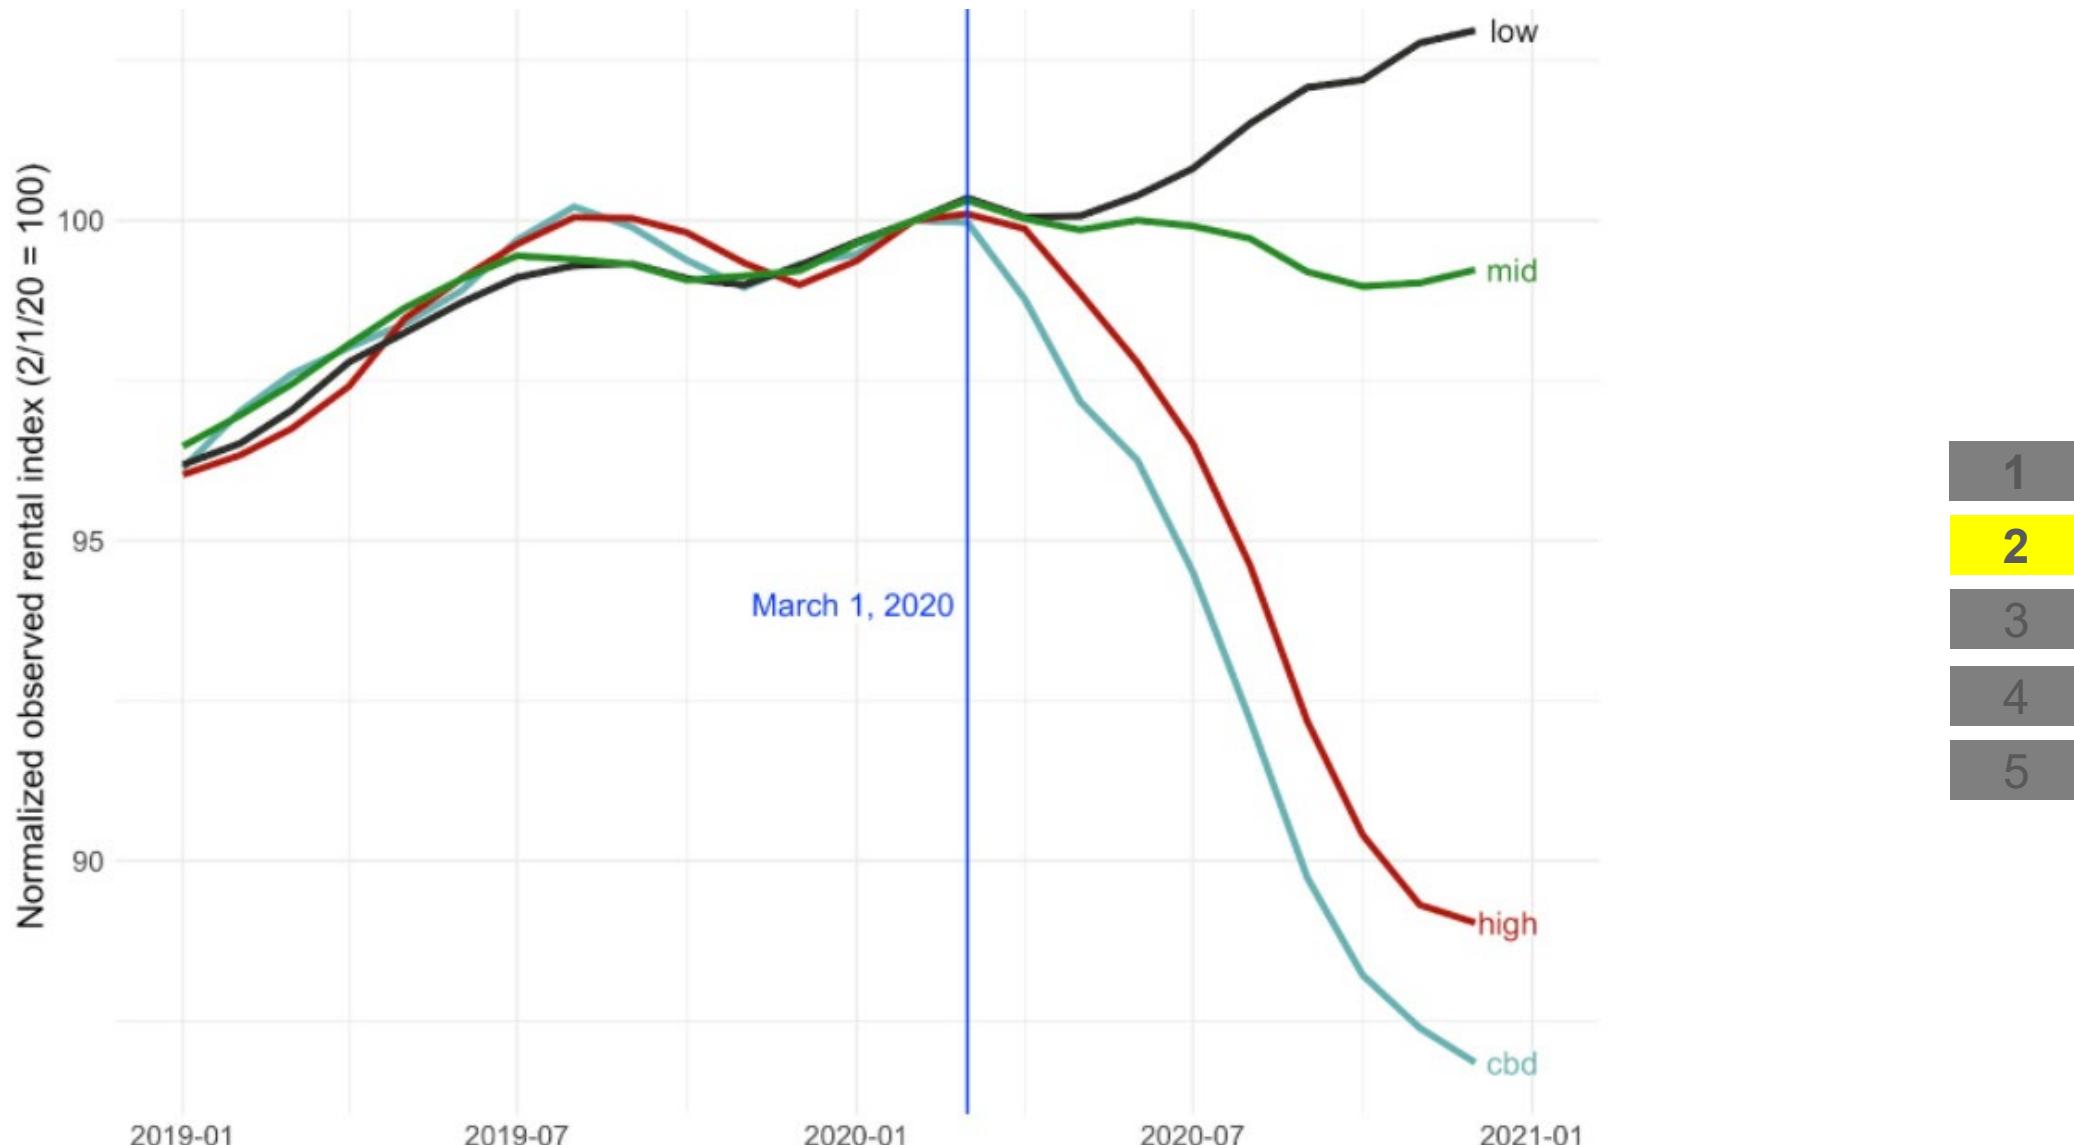

US analysis

- Substantial reallocation of housing and office demand away from dense city centres toward city outskirts and suburbs. '**Doughnut effect**' – the rise of the suburbs and the slump of the city centre, driven by a fear of crowds and the growth of working from home
- Arjun Ramani, Nicholas Bloom: The doughnut effect of COVID-19 on cities. January 2021
<https://voxeu.org/article/doughnut-effect-covid-19-cities>

#WalkAndRollCities
Where streets belong to people!

Rental index for 12 largest US metros broken by density groups

Source: Arjun Ramani, Nicholas Bloom The doughnut effect of COVID-19 on cities January 2021

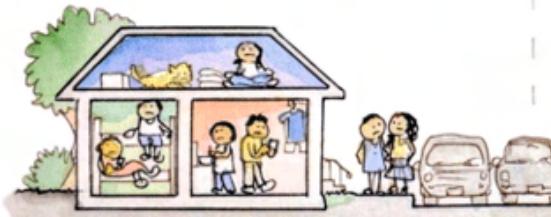

The dilemma of urban density

„It is not density alone that makes cities vulnerable to COVID-19, but the structural economic and social conditions that make it possible or difficult for cities to take suitable measures against the spread of the virus. Cities that are characterized by inequality, poor living conditions and the spatial concentration of poor sections of the population are far more vulnerable than the wealthy.” OECD

There's a Difference!

Overcrowding

Too many people
in each home.

Density

Enough homes for
all the people.

More Density = Less Overcrowding

Ideas about the post-COVID city

How can our existing cities be changed into more equitable and sustainable places, in order to avoid uncoordinated urban sprawl?

- **regional view:** blended city
- **city view:** better density in city core, managed suburbanization
- **urban mobility:** towards active mobility forms and multimodality with public transport
- **public space:** retrieve public space from cars
- **services:** allow and strengthen communities, turn places into common use

The re-humanization of cities

- Again, systematic policy and planning interventions are needed, this time in the opposite direction to the 1950s. Parallel and interrelated changes in mobility and public space development should aim to limit car use and support active travel, while transforming public spaces for the benefit of residents.
- Overall Concept: Levine-Grengs-Merlin (2019) ‘From Mobility to Accessibility: Transforming Urban Transportation and Land-Use Planning’

1

2

3

4

5

#WalkAndRollCities
Where streets belong to people!

An overarching concept: ,Accessibility shift'

Transportation and land-use planning should be strongly connected, and based on people's ability to reach destinations, rather than on their ability to travel fast.

The new approach should be based on

- **connectivity:** forms of connection that avoid physical displacement should also be considered;
- **proximity:** the city must be transformed so that more and more needs can be met within a short distance without the use of cars;
- **mobility:** addressing the remaining mobility needs should be based on integrating different modes of transport, with a focus on public transport and active forms of mobility, in addition to restricting car use.

Four models

Using infrastructures to minimize mobility can follow four models:

- the same structure can be used **simultaneously for multiple functionalities**;
- second, the **different use of the same structure at different times**;
- third, **seasonal variation** in use;
- fourth, **real-time adaptive change** in use through resilient responsive structures.

‘Proximity’: innovative urban spatial visions

The public sector has a key role to play in initiating and managing ‘proximity’ transformations in developing and implementing innovative urban spatial planning visions.

- **‘15-minute city’ approach**
- **‘Superblock’ idea**
- **“Liberating” city roads and squares from car traffic**
(transforming shopping streets, climate-friendly streets, key spaces into public spaces)
- **transforming the road network, turning access roads into ‘urban boulevards’**

1

#WalkAndRollCities
Where streets belong to people!

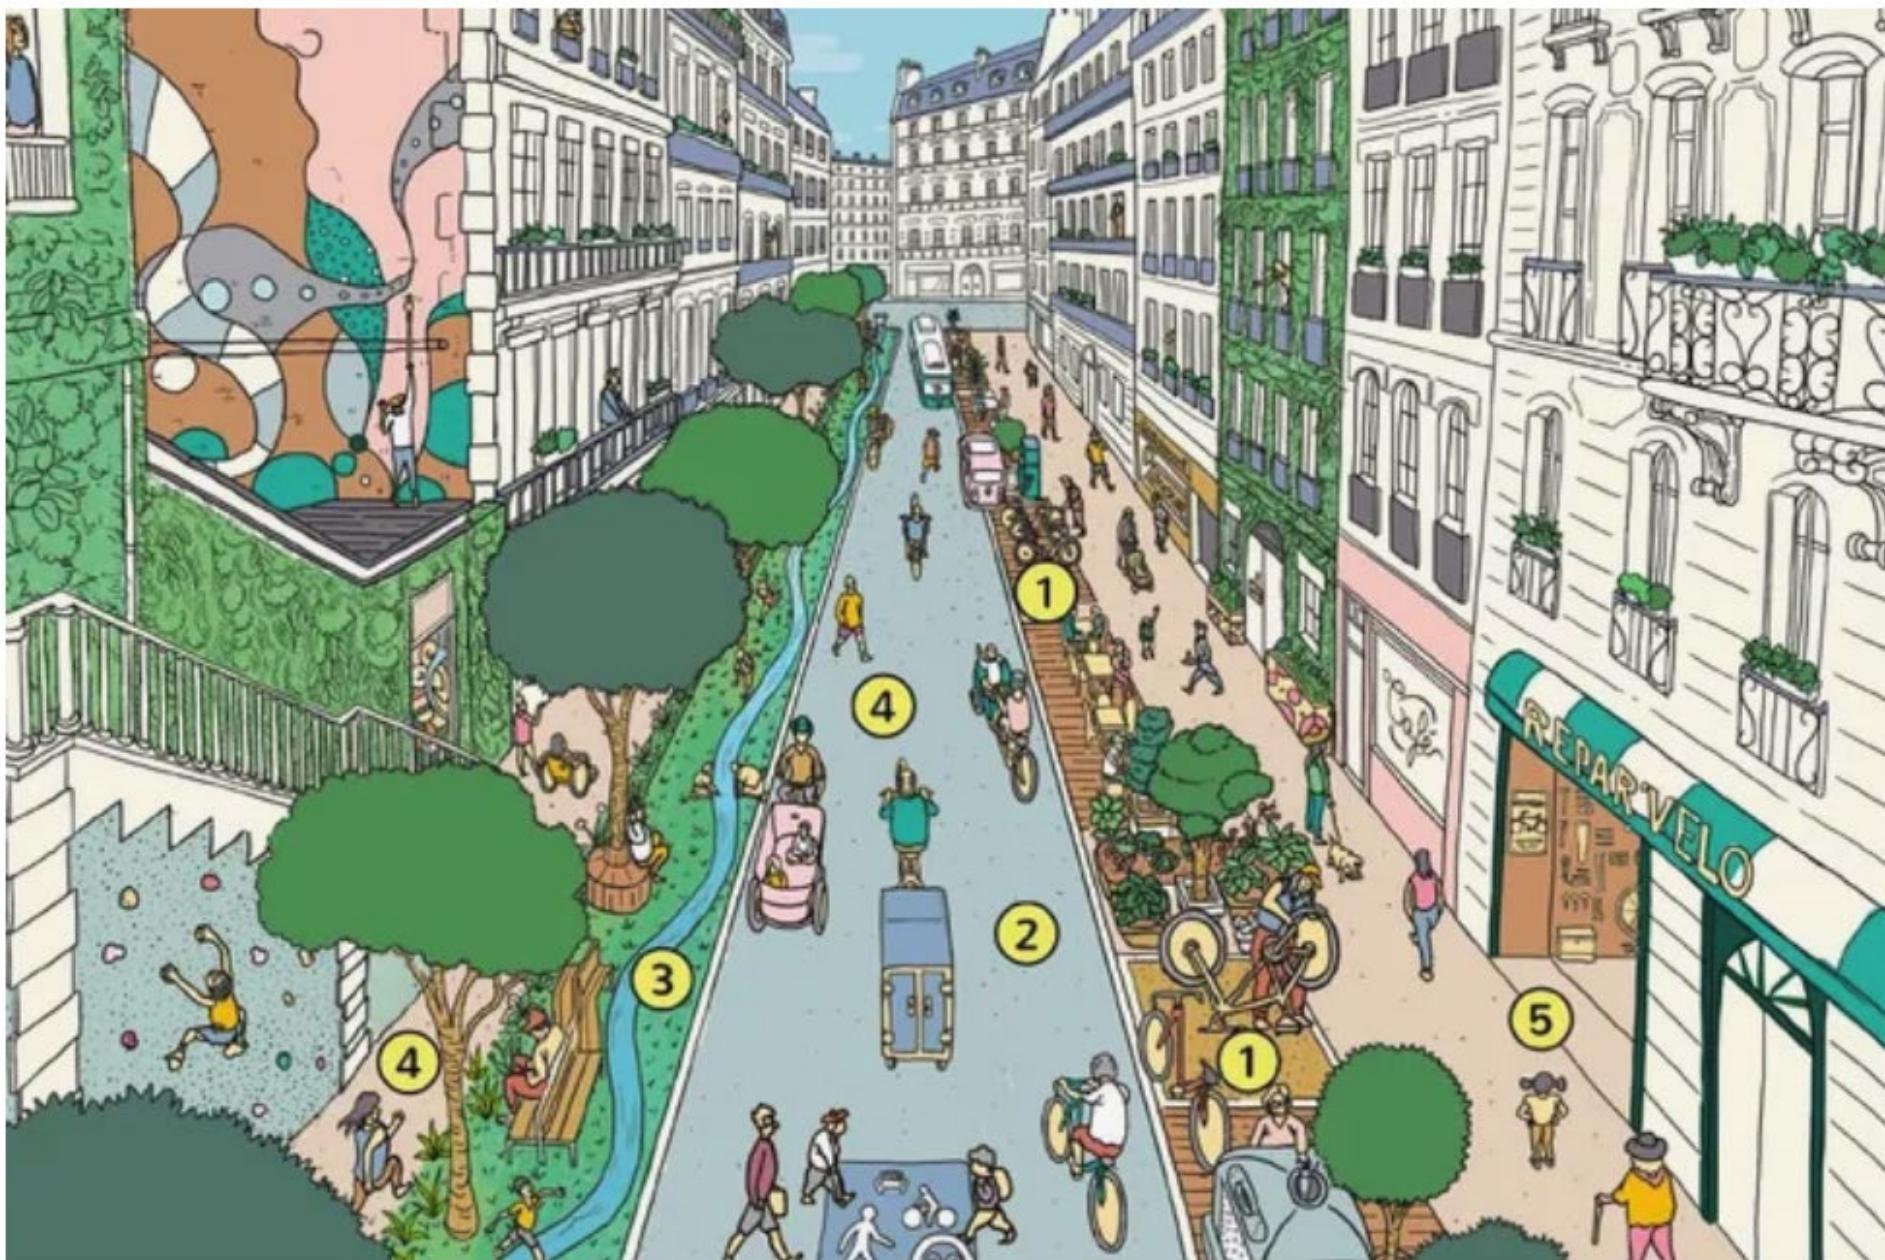

15 minutes city in dense urban areas, 30 minutes city in less dense areas.

Proximity solutions are based on **6 basic factors**: work, care, care, learning, leisure, relationships.

The aim is to break the **monofunctional solutions** towards 1
2
3
4
5 prosperity, sociability and sustainability, for which indicators have been developed.

There are **three rules for mixing nearby uses**: chrono-urbanism (the new rhythm of the city), chrono-topia (multi-purpose functions), topophilia (love of place).

SANTO DOMINGO V CENTENARIO EXPRESSWAY TRANSFORMATION, SUPERWIEN, 2022

Tempo'30: Brussels

- In 2019, a new city leadership was elected in Brussels with the following political program: "The government will create a large 30 km / h zone from 1 January 2021, with the exception of the largest roads.,,"
- This policy agenda has been implemented in recent years. Of course, many actors initially resisted the idea, but instead of reacting to everyone, the city focused primarily on supporters of the program.
- Tempo 30 became the new standard, so 4,000 "Zone 30" boards were removed and new "Tempo 50" boards were placed in areas with higher speed limits.

1

2

3

4

5

#WalkAndRollCities
Where streets belong to people!

- New signs
- Remove signs « zone 30 »
- Informative signs
- Painted on the ground

Lesson 1: get political support, with concrete deadline.

Lesson 2: Talk about it with your stakeholders (but don't listen to everyone). There were many actors resisting. The city did not react on everyone, but focussed on allies. Over 1000 umbrellas were produced by a group with 30!

Lesson 3 : Adapt the legislation and make a new map. Tempo30 is the new normal

Lesson 4 : Sell your story to everyone (and do it on a large scale).

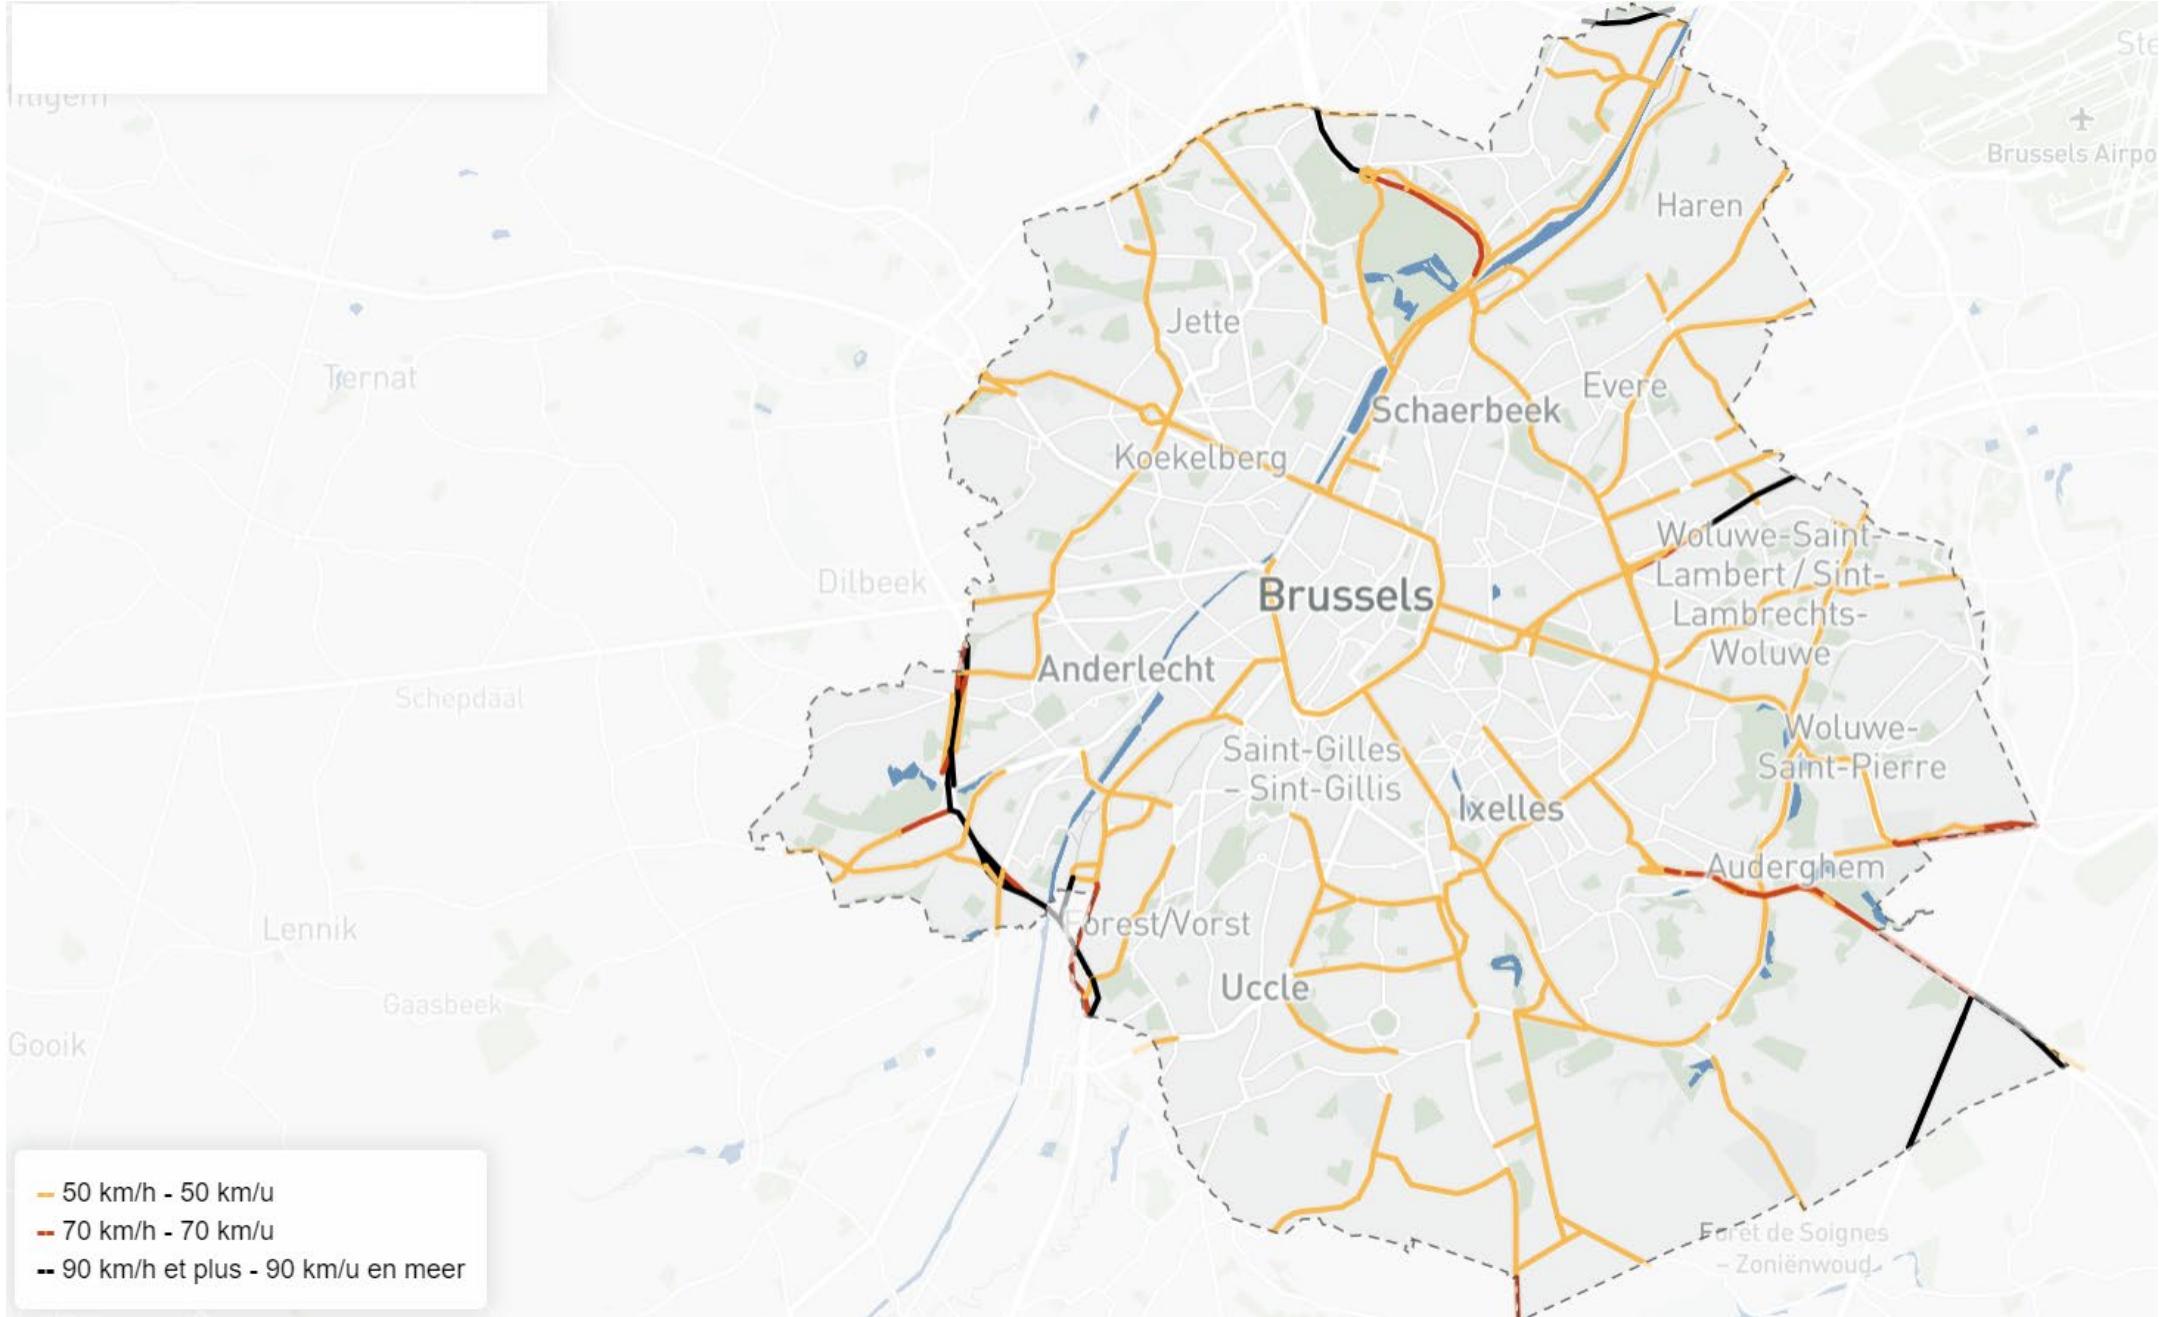

1

2

3

4

5

Source: <https://city30.brussels/map/>

- **Communication** was very important: the idea was advertised everywhere and the information was mailed to 600,000 addresses. The press and social media sites were full of news about the change. The implementation was carefully controlled and the speed limit was checked thanks to 80 invisible new cameras.
- **Monitoring results:** recent observations show that the average speed of cars has declined, even on roads that have previously had a speed limit of 30 km / h. The total time spent traveling by car has increased, but not much, while the number of accidents has decreased. Noise levels have dropped: people have even begun to complain about the noise of the tram, which was previously hidden by louder road users.

1

2

3

4

5

#WalkAndRollCities
Where streets belong to people!

Tempo'30: Graz – some short facts

- City wide speed limit 30 in place since 1992
 - Only exemption is priority roads
 - which were about 220 km of roads
 - and 770 km were residential roads
- > 85% of traffic takes place on priority roads!

Initial situation at the start of the idea:

Strong opposition from diverse stakeholders!

1
2
3
4
5

#WalkAndRollCities
Where streets belong to people!

Tempo'30: Graz – the key elements

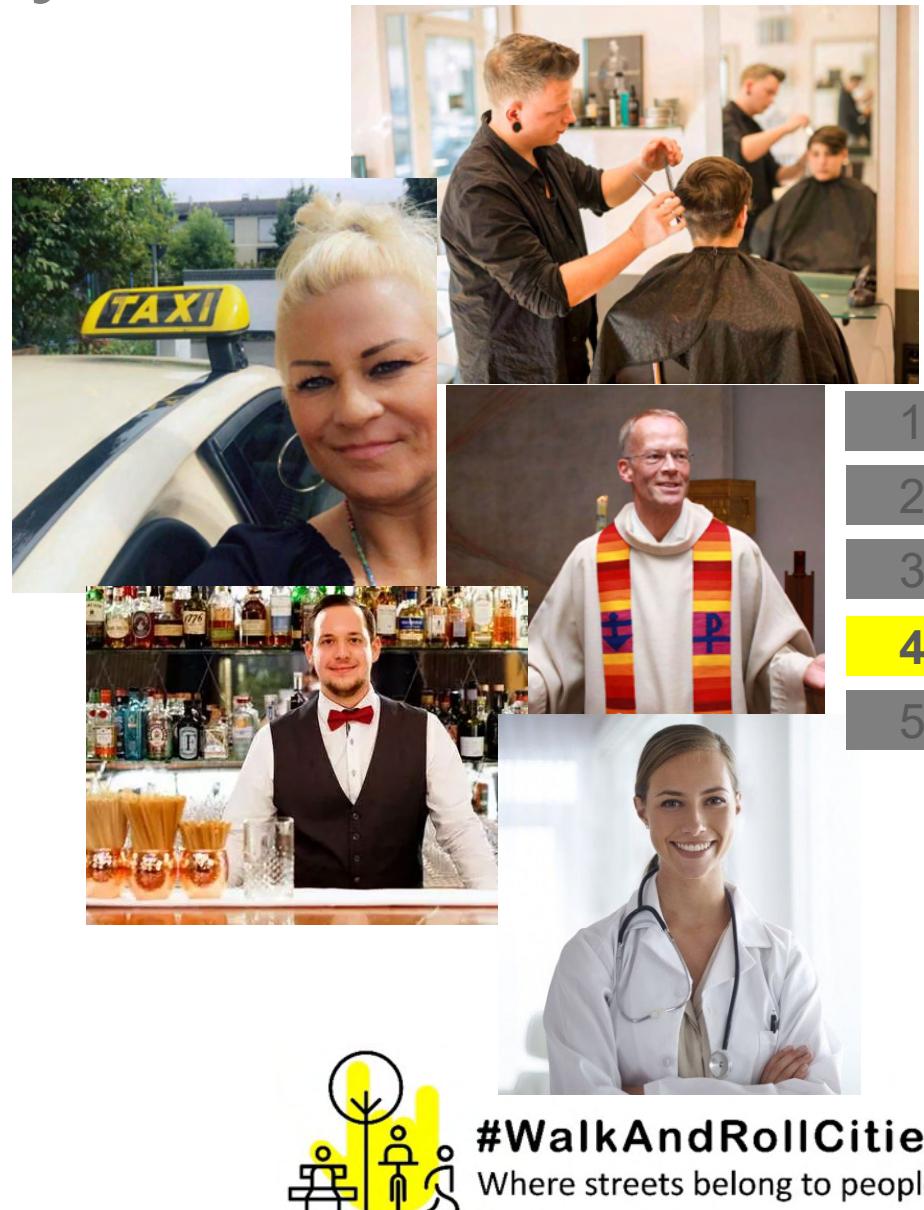

The communication campaign

Used various standard elements such as ttt

- Media, discussion groups, leaflets, videos...

Used a multiplier campaigning approach!

- Invited people that talk a lot to others and are trusted persons to discuss the idea of speed 30
- Like taxi drivers, haircutters, bartenders, priests, doctors

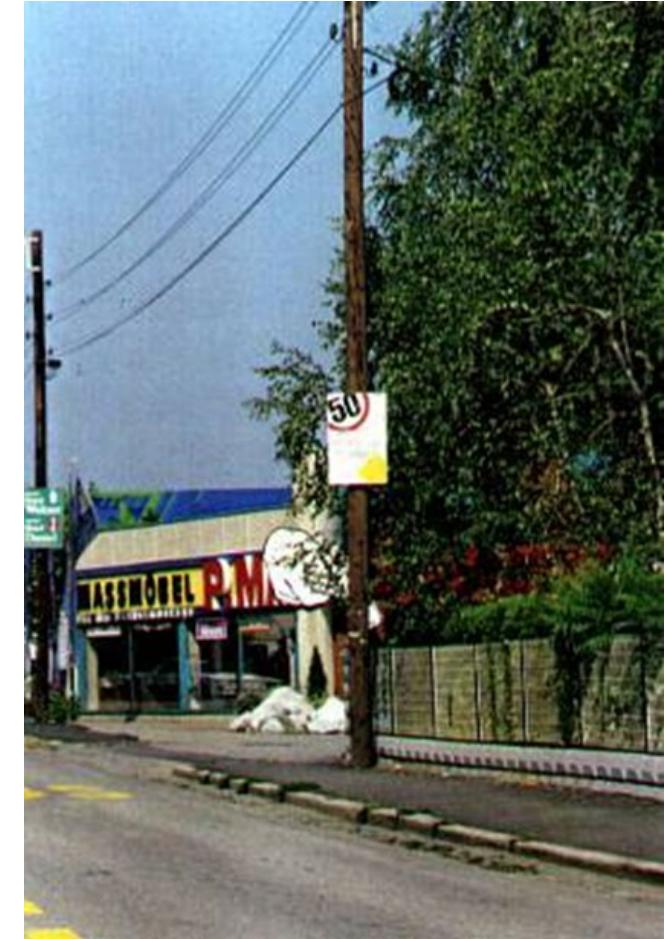

#WalkAndRollCities
Where streets belong to people!

Tempo'30: Graz – the key elements

The pilot phase

- **Oppositions** to introducing speed 30 was **high start of the 90ies**
- **Reason:** campaign of opponents to fight it.
- City **transformed** their claims for a public vote on the idea to a test-phase first (...well knowing that a vote put a stop to the idea)
- **Argument:** people do not know what the vote on, since they did not experience it so far.

-> 2-year test phase starting 1992

'Transforming mobility': public transport and active mobility

- Public transport must become a **quality service, forming the backbone of an integrated urban transport system** and ensuring that cities remain the centers of functional urban areas.
- It is important to **increase the opportunities for active forms of mobility**: expanding the cycle path network, integrating micromobility forms into the system

TRANSIT ORIENTED DEVELOPMENT

Für uns bedeutet kollektives Planen, in einem Dialog mit Stadtplanern, Landschaftsplanern, anderen Fachplanern und der interessierten Bevölkerung einen Konsens über die Entwicklung eines Stadtgebietes zu erstellen. Wir sehen das Obere Hausfeld als ein lebhaftes Quartier bestehend aus einem engmaschiges Netzwerk an öffentlichen und halb-öffentlichen Raumsequenzen, das spannende, abwechslungsreiche urbane Qualitäten erkennen lässt. Der städtebauliche Grundsatz für das Hausfeld ist die Entwicklung von Dichte mit klarem Bekenntnis zu Großzügigkeit auf den Freiflächen am Baufeld, als Beitrag zu Wohnqualität und Privatheit und zu Kompaktheit im öffentlichen Straßenraum zur Stimulierung von Frequenz und Urbanität. Aufbauend auf dem Konzept entwickelten wir gemeinsam mit verschiedenen Disziplinen einen intelligenten Raster, welcher als Basis für die Entwicklung eines Regelwerks für die Implementierung diente. Die Stadtsockelzone gilt als Herz des urbanen Alltags. Daraus resultierte die Idee eines Think-Tanks. Gemeinsam mit unterschiedlichen Interessenten wurde die Zukunft der Erdgeschoßzonen reflektiert. Daraus hat sich ein Netzwerk kristallisiert.

OBERES HAUSFELD, VIENNA, SUPERWIEN, 2015-2022

führte zu einem Masterplan. Dieser spiegelt ein durchdachtes urbanes Quartier wieder und liegt der Stadt Wien zur Widmung vor.

Cities
for people!

Mobility hubs and points

- Serve as a focal point of alternatives to classic modes and as a range extender to public transport.
- Include elements such as:
 - Cargo bike rentals
 - Bike-sharing, Car-Sharing, scooter-sharing
 - Service points with air pumps and repair gear
 - Bicycle and scooter parking
 - E-charging stations
- Work as service offers at ***public transport interchanges***, smaller versions at ***PT stops*** and stand-alone solutions in e.g. ***residential areas***

The role of micromobility

Survey on E-scooters potential as first/last mile access to public transport stations in Munich:

- Compared coverage of public transport access by 5min of walking and 5 min of E-Scooter ride
- Analysis for
 - a) all high-frequency public transport stops (> 288 departures / day)
AND
 - b) all high-frequency rail stations (metro and light rail)
- Result for a) are that 5 min walk covers 80% of population and b) that 5 min E-scooter ride covers 99% of population

#WalkAndRollCities
Where streets belong to people!

The role of micromobility

- For high-frequency rail stations, the difference is significantly higher:

The role of micromobility

- E-bikes and E-scooters can:
 - Substitute public transport where service are not sufficient
 - Extend public transport's catchment areas
- They replace however in most cases:
 - Public transport trips
 - Walking
 - Taxis or other ride-sharing services

New challenges, new mobility actors, new dilemmas

- **Customer needs and mobility patterns** change due to teleworking, e-commerce, accelerated digitalization, increased attention to the 'local' (15-minute city), safety concerns.
- **New mobility players** are coming in, and an innovative and dynamic ecosystem are built up, based on more electrified, shared technologies. All these need space and raise the challenge of how they can be connected.
- All this leads to the **scarcity of space**: how to better manage urban space and mobility services towards more sustainable cities. First question: is the space for parking, or a bus lane, or pedestrians...? Next questions: where to put the bike-share rack, the e-roller rack; to whom to give parking space: residents, long-term visitors, loading of goods? (Source: Tiago Lopes Farias)

Further tips to implement the ,accessibility revolution

- **Comprehensive mobility plans** to integrate different forms of mobility, connecting to public transport, as backbone
- **Metropolitan Transport Associations:**
 - integrating different modes of transport,
 - using innovative financial techniques to discourage car use + reducing inequalities in mobility
- **Encouraging bottom-up initiatives and experiments**

#WalkAndRollCities
Where streets belong to people!

Summary: an accessibility revolution

- **WHAT:** connect changes in the use of public space and mobility innovations to each other. Public space interventions can push for the mobility change, and vica versa.
- **HOW:** involve schools/children, connect other positive aspects, eg greening as incentive. Testing and experimenting are important means to convince people. Concentrate on supporters instead of dealing with all protesters in details.
- **MAKE PERMANENT:** convince politicians, create institution, use the EU money (New Green Deal, RRF). Co-creation and innovative planning can lead to regulatory and institutional changes on the level of the whole urban area, connecting the scales from metropolitan down to neighbourhood and street level.
